ILIX Präzisionswerkzeuge GmbH

Die Firma ILIX Präzisionswerkzeuge GmbH wurde am 1. Juli 1895 in Frankfurt am Main gegründet. Ziel des Unternehmens war schon damals die Herstellung von Gewindebohrern, Reibahlen, Fräsern und Spiralbohrern. Mit der Fertigung von Werkzeugen aus dem neuartigen Werkstoff Schnellarbeitsstahl rief man im Jahr 1918 den Markennamen ILIX ins Leben. Wir bieten ein breites Programm ausgereifter Lösungen für die mechanische Bearbeitung. Unsere langjährige Erfahrung in der Konstruktion von Werkzeugen bildet die Basis qualitativ hochwertiger, präziser und leistungsfähiger Produkte für die unterschiedlichsten Anwendungen.
Unsere über hundertjährige Präsenz im Markt hat zu einem geschlossenen Netzwerk von Geschäftspartnern geführt, das uns ermöglicht, weltweit mit den Werkzeugen aus dem Hause ILIX mit professioneller Unterstützung in Betrieben rund um die Zerspanung vertreten zu sein.

ILIX Präzisionswerkzeuge GmbH was founded on the 1st of July 1895 in Frankfurt / Main. Ever since the company objective has been the production of precision twist drills, taps countersinks and reamers. With the opportunity to use the advantages of high-speed alloy steel in 1918 the brand name ILIX was introduced.
Today we offer a wide range of fully developed solutions for metal cutting. Our long experience in manufacturing tools builds the strong foundation for our high-quality, precise and highly productive precision products for even the most demanding metal cutting applications. Our presence for more than 100 years led to a network of business partners, which helps ILIX Präzisionswerkzeuge tools to be represented all over the world.

ILIX Präzisionswerkzeuge GmbH
bietet ein breites Programm
ausgereifter Lösungen für
die mechanische Bearbeitung.
Die langjährige Erfahrung der ILIX
Gruppe bildet die Basis qualitativ
hochwertiger, präziser
und leistungsfähiger Produkte
für die unterschiedlichsten
Anwendungsgebiete.

ILIX Präzisionswerkzeuge GmbH
offers a wide range of advanced solutions for mechanical applications.
The accumulated experience of the
ILIX group has led to tools of high
quality, precision and performance
covering the most diverse
of applications.

Hochleistungswerkzeuge letzter Generation ermöglichen die Bearbeitung schwieriger Materialien mit besten Schnittgeschwindigkeiten und hervorragenden Ergebnissen.
Last generation high performance tools permit machining difficult materials with high cutting data and excellent results.

Werkzeuge mit Schwerpunkt auf besten Bohrergebnissen und Spanverhalten.
Tools for best cutting action and chip removal.

Gewindebohrer aus speziellen Materialien mit bester Produktivität und Verlässlichkeit.
Taps constructed out of special materials for best productivity and reliability.

Zum Einsatz mit hohen Schnittgeschwindigkeiten und besonderem Augenmerk auf Stabilität und Zuverlässigkeit während der Bearbeitung.
Conceived for high speed threading applications, are reliable and guarantee high stability.

Mit hoher Leistung einsetzbar in verschiedensten Materialien.
High performance in a wide range of materials.

Zur Herstellung von Bohrungen mit engsten Toleranzen und hervorragenden Oberflächengüten.
For high precision holes and excellent surface finishing.

Technischer Teil mit Schnittwertempfehlungen.
Technical part with cutting data recommendation.

RECORD **HD**

Rekord HD HSS Co Bohrer sind speziell entwickelt um in Stahl und Gusseisen zu bohren und sorgen für hohe Leistungen und Zuverlässigkeit.

Record HD HSS Co drills are specifically engineered to drill steel and cast iron and ensure high performances and reliability.

SPEZIELLE SPITZENGEOMETRIE 130°
130° point design

NIEDRIGER DRUCK VERHINDERT WERKSTÜCKDURCHBIEGUNG
Low thrust prevents workpiece flexing

AUSGEZEICHNETE VORSCHUBKRAFT UND TORSIONSSTEIFIGKEIT BEI UNSTABILEN ARBEITSBEDINGUNGEN
Excellent feed force and torsional resistance in unstable working conditions

EXZELLENTE ZENTRIERFÄHIGKEIT
Excellent centring capabilities

EINZIGARTIGE NUTENPROFIL
Unique flute design

GROSSE SPANRAUM FÜR EINE EFFIZIENTE UND SCHNELLE SPANABFUHR
Large flutes for an efficient and fast chip evacuation

SCHNEIDFÄHIGKEIT MIT GERINGEREN ANZAHL VON UNTERBRECHUNGEN ALS HERKÖMMLICHE HSS-CO BOHRER
Cutting capability with lower number of steps than conventional HSS-Co drills

QUALITÄT HSS-CO
Quality HSS-Co

PVD TIN UND TIALN-BESCHICHTUNGEN MIT HOHER VERSCHLEISSFESTIGKEIT UND NIEDRIGE HAFTUNG AUF LANGSPANENDEN STAHLWERKSTOFFEN
PVD TiN and TiAlN coating with high wear resistance and low adhesion to long chip steel materials

DIE HOCHGLANZPOLIERTE OBERFLÄCHE SORGT FÜR EINE BESSERE SPANABFUHR AUCH BEI ANWENDUNG VON NIEDRIGEM KÜHLMITTELDRUCK.
The highly polished surface ensures better chip evacuation even when low-pressure coolant is applied

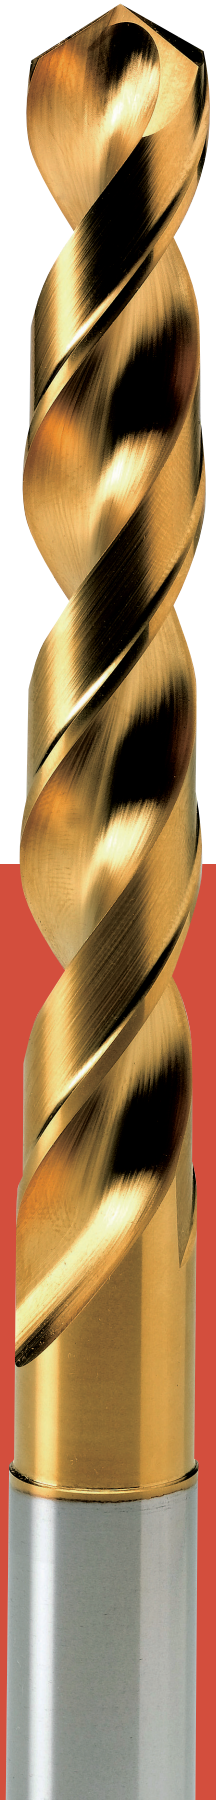
RECORD EVOLUTION **VA**

Rekord Evolution VA HSS-Co Bohrer sind speziell entwickelt um in Edelstahlwerkstoffe, Titanlegierungen zu bohren und hohe Leistung und Zuverlässigkeit zu erzielen.

Record Evolution VA HSS-Co drills are specifically engineered to drill stainless steel materials and titanium alloys ensuring high performances and reliability.



SPEZIELLE SPITZENGEOMETRIE 120°
120° point design

NIEDRIGER DRUCK VERHINDERT WERKSTÜCKDURCHBIEGUNG
Low thrust prevents workpiece flexing

AUSGEZEICHNETE VORSCHUBKRAFT UND TORSIONSSTEIFIGKEIT BEI UNSTABILEN ARBEITSBEDINGUNGEN
Excellent feed force and torsional resistance in unstable working conditions

EXZELLENTE ZENTRIERFÄHIGKEIT
Excellent centring capabilities

ERHÄLTLICH IN LÄNGEN DIN 1897 – DIN 338
Available in lengths DIN 1897 – DIN 338

SPEZIELLES NUTENPROFIL, GROSSE SPANRAUM FÜR EINE EFFIZIENTE UND SCHNELLE SPANABFUHR
Unique flute design, Large chip pockets for an efficient and fast chip evacuation

SCHNEIDFÄHIGKEIT MIT GERINGEREN ANZAHL VON UNTERBRECHUNGEN ALS HERKÖMMLICHE HSS-CO BOHRER
Cutting capability with lower number of steps than conventional HSS-Co drills

QUALITÄT HSS-CO
Quality HSS-Co

PVD TIN UND TIALN-BESCHICHTUNGEN MIT HOHER VERSCHLEISSFESTIGKEIT UND N IEDRIGE HAFTUNG AUF LANGSPANENDEN STAHLWERKSTOFFEN
PVD TiN coating with high wear resistance and low adhesion to steel and abrasive materials

DIE HOCHGLANZPOLIERTE OBERFLÄCHE SORGT FÜR EINE BESSERE SPANABFUHR AUCH BEI ANWENDUNG VON NIEDRIGEM KÜHLMITTELDRUCK.
The highly polished surface ensures better chip evacuation even when low-pressure coolant is applied

RECORD **PM**

Rekord PM HSS-Co-PM-Sinter Bohrer sind speziell entwickelt um Stahl und Gusseisen zu bohren dabei sorgen sie für hohe Leistungen, Zuverlässigkeit und längere Standzeiten als konventionellen HSS Co Bohrer.

Record PM HSS-Co-PM sintered drills are specifically engineered to drill steel and cast iron and ensure high performances, reliability and longer tool life than conventional HSS-Co drills.

SPITZENGEOMETRIE 130°
130° point design

NIEDRIGER DRUCK VERHINDERT WERKSTÜCKDURCHBIEGUNG
Low thrust prevents workpiece flexing

AUSGEZEICHNETE VORSCHUBKRAFT UND TORSIONSSTEIFIGKEIT BEI UNSTABILEN ARBEITSBEDINGUNGEN
Excellent feed force and torsional resistance in unstable working conditions.

EXZELLENTE ZENTRIERFÄHIGKEIT,SPEZIELLES NUTENPROFIL
Excellent centring capabilities, Unique flute design

GROSSE SPANRAUM FÜR EINE EFFIZIENTE UND SCHNELLE SPANABFUHR
Large chip pockets for an efficient and fast chip evacuation

SCHNEIDFÄHIGKEIT MIT GERINGEREN ANZAHL VON UNTERBRECHUNGEN ALS HERKÖMMLICHE HSS-CO BOHRER
Cutting capability with lower number of steps than HSS-Co drills

QUALTÄT HSS CO-PM-GESINTER
Quality HSS-Co sintered

MEHRLAGEN PVD TISI BESCHICHTUNG MIT HOHER VERSCHLEISSFESTIGKEIT UND GERINGE HAFTUNG AUF LANGSPANENDEN STAHLWERKSTOFFEN. DIE HOCHGLANZPOLIERTE OBERFLÄCHE SORGT FÜR EINE BESSERE SPANABFUHR AUCH BEI NIEDRIGEN KÜHLMITTELDRUCK
Multilayer PVD TiSi coating with high wear resistance and low adhesion to long chip steel materials. The highly polished surface ensures better chip evacuation even when low-pressure coolant is applied

RECORD **2S - 2S i**

Rekord 2S und 2Si Vollhartmetallbohrer bieten die höchsten Abtragsleistung und längste Lebensdauer in Stahl, Guss und NE-Materialien. Rekord 2S und 2Si Vollhartmetallbohrer sind mit und ohne innen Kühlmittel in 3xD und 5xD verfügbar.

Record 2S and 2Si solid carbide drills offer the highest metal removal rates and longest tool life in steel, cast iron, and non-ferrous materials.
Record 2S and 2Si solid carbide drills are available with and without internal coolant in 3xD and 5xD lengths.

RECORD **HP i**

Rekord HP i Vollhartmetallbohrer bieten die hohe Spanleistung und lange Standzeit in legierten Stählen bis 1300 N/mm² und Gusswerkstoffe.

Record HP i high performance solid carbide drills, offer the highest metal removal rates and longest tool life in high and medium alloyed steel and cast iron materials.

BOHRER MIT HP GEOMETRIE, VIER FÜHRUNGSFASEN UNTERSTÜTZEN GENAUE UND GERADE BOHRUNGEN
Drill with Geometry HP 4 margin lands improves hole straightness and quality

EXZELLENTE ZENTRIERFÄHIGKEIT
Excellent centring capabilities

VERBESSERUNG FÜR EINE EFFIZIENTE SPANABFUHR IN LEGIERTEN STÄHLEN BIS 1300 N/MM² BEIM BOHREN
Improved chip evacuation in mid-L/D drilling operations

VHM FEINSTKORN K40F MIT EINER MEHRLAGEN TIALN FUTURA PLUS BESCHICHTUNG
Solid carbide micro-grain K40F with multilayer TiAlN Futura Plus coating

DIE HOCHGLANZPOLIERTE OBERFLÄCHE SORGT FÜR EINE BESSERE SPANABFUHR AUCH BEI ANWENDUNG VON NIEDRIGEM KÜHLMITTELDRUCK
The highly polished surface ensures superior chip evacuation even when low-pressure coolant is applied

RECORD EVOLUTION **TP**

Möglichkeiten der Kosten und Prozessoptimierung basieren weitgehend auf dem Einsatz der für die Bearbeitungsfälle geeigneten Werkzeuge.
Bestimmte Einsatzgebiete erfordern ein Maximum an Maschinenstabilität vereint mit besonderen Werkzeuggeometrien und Oberflächenbeschaffenheiten.
ILIX neueste Programmerweiterung ermöglicht die Bearbeitung von Materialien mit Härten über 50 HRc.

Cost and process optimising depends largely on the use of tools adequate for the application. Some applications require a maximum machine stability combined with special tool geometries and surface characteristics. ILIX allows the machining of materials with a hardness superior to 50 HRc possible.

HOCHLEISTUNGS-SPIRALBOHRER AUSVHM - FEINSTKORN ZUR BEARBEITUNG VON MATERIALEN MIT HÄRTEN ÜBER 50 HRC
High Performance twist drills made of solid carbide micro grain for machining materials with a hardness superior to 50 HRC

RECORD **DH i**

Rekord DHi sind VHM-Tieflochbohrer mit Kühlkanälen für Kühlmittel - MMS. Diese Bohrer sind zum Bohren von tiefen Löchern in Stahl,Edelstahl, hochlegierte Stähle und Gusseisen.

Record DHi are solid carbide deep hole drills. Internal coolant - MQL
These drills are designed for drilling deep holes in stainless steel, cast iron materials and high temperature alloys.

4 FÜHRUNGSFASEN
Four margin lands

VERBESSERTE BOHRUNG GEOMETRIE
Improves hole geometry

VERBESSERT DIE BOHRUNGS AUSRICHTUNG WENN DURCH EINE QUERBOHRUNG GEBOHRT WIRD
Improves hole alignment when drilling through cross holes

EINZIGARTIGES NUTENPROFIL
Unique flute design

DIE HOCH POLIERTE UND GELÄPPTE OBERFLÄCHE, VOR UND NACH DEM BESCHICHTEN VERBESSERT DIE SPANABFUHR
The highly polished and lapped surface, before and after coating, improves chip evacuation

BESSERE BOHRUNGSOBERFLÄCHEN QUALITÄT. QUALITÄT K30F
Better hole surface quality, Quality K30F

VHM FEINSTKORN K20F UND K30F MIT TT MEHRLAGEN BESCHICHTUNG IN TIALN FUTURA PLUS PVD SORGT FÜR EINE HERVORRAGENDE VERSCHLEISSFESTINGKEIT, NIEDRIGE REIBUNG UND STABILITÄT AUCH IN DER MINIMALMENGENSCHMIERUNG (MMS) ANWENDUNG
Solid carbide micro-grain K20F with TT multilayer coating in TiAlN Futura Plus PVD ensures excellent wear resistance, low-friction and stability even in minimum quantity lubrication (MQL) applications

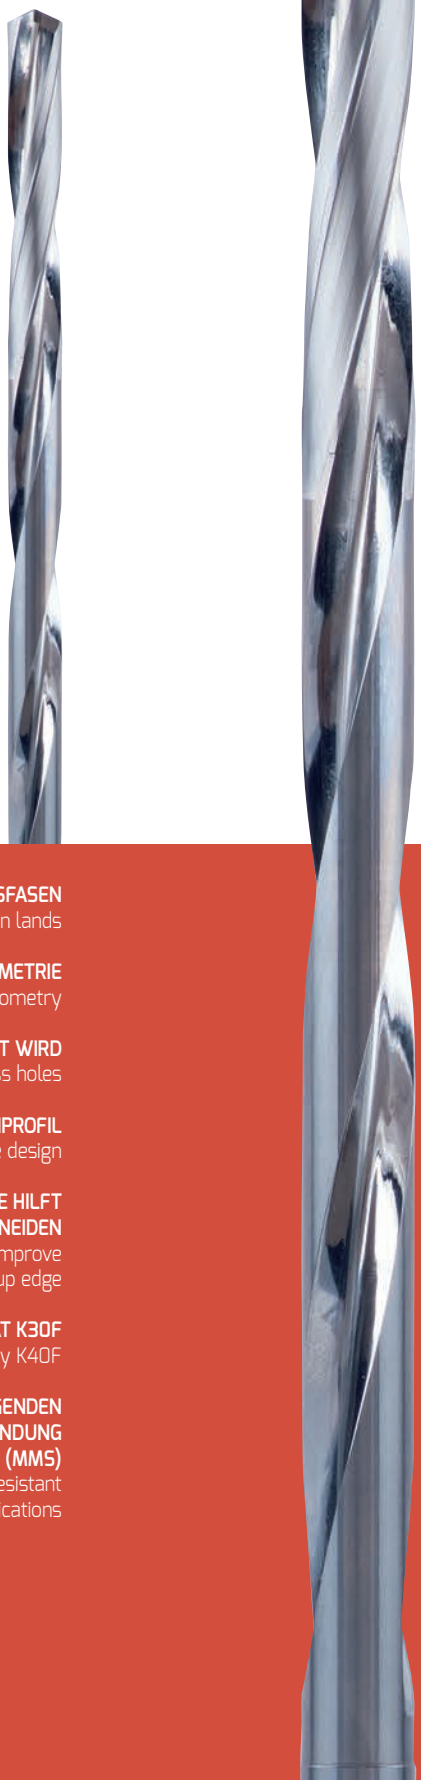
RECORD **DH i Alu**

RECORD
DH i

Rekord DHi Alu sind VHM-Tieflochbohrer. Innere Kühlmittel - MMS,diese Bohrer sind zum Bohren von tiefen Löchern in Aluminium, Aluminiumlegierungen und Nichteisen-Materialien.

Record DHi Alu are solid carbide deep hole drills. Internal coolant - MQL, these drills are designed for drilling deep holes in aluminium, aluminium alloys and non-ferrous materials.



4 FÜHRUNGSFASEN
Four margin lands

VERBESSERTE BOHRUNG GEOMETRIE
Improves hole geometry

VERBESSERT DIE BOHRUNGS AUSRICHTUNG WENN DURCH EINE QUERBOHRUNG GEBOHRT WIRD
Improves hole alignment when drilling through cross holes

EINZIGARTIGES NUTENPROFIL
Unique flute design

DIE HOCH POLIERTE UND GELÄPPTE OBERFLÄCHE MIT FORTSCHRITTLICHER TECHNOLOGIE HILFT DIE SPANABFUHR ZU VERBESSERN UND VERHINDERT AUFBAUSCHNEIDEN
The highly polished and lapped surface, with advanced technology, helps to improve chip evacuation and prevent build up edge

BESSERE BOHRUNGSOBERFLÄCHEN QUALITÄT. QUALITÄT K30F
Better hole surface quality, quality K40F

HOCHDREHFESTE VOLLHARTMETALL K40F FEINSTKORN BIETET EIN HERVORRAGENDEN VERSCHLEISSSCHUTZ, NIEDRIGE REIBUNG UND STABILITÄT AUCH IN ANWENDUNG MIT MINIMALMENGENSCHMIERUNG (MMS)
Highly torsional-resistant solid carbide K40F micro-grain, offers an excellent wear resistant low-friction and stability even in minimum quantity lubrication (MQL) applications

MicroDrill i

Microdrill sind VHM-Tieflochbohrer 135 °-Spitzen-Geometrie. Innere Kühlmittel - MMS diese Bohrer zum Bohren von tiefen Löchern in Stahl, Gusseisen und Titanlegierungen ausgelegt.

MicroDrill are solid carbide deep hole drills 135° point geometry.
Internal coolant MQL – the drills are designed for ensuring a good stability during the drilling process on materials like steel, cast iron and titanium alloys.

DIE HOCH POLIERTE UND GELÄPPTE OBERFLÄCHE, VOR UND NACH DEM BESCHICHTEN VERBESSERT DIE SPANABFUHR
The highly polished and lapped surface, before and after coating, improves chip evacuation

4 FÜHRUNGSFASEN FÜR BESSERE BOHRUNGS GERADHEIT
4 margin lands for a better hole straightness

VHM FEINSTKORN K10 MIT KOPF-BESCHICHTUNG. DIE MEHRLAGEN BESCHICHTUNG IN TIALN FUTURA PLUS PVD SORGT FÜR EINE HERVORRAGENDE VERSCHLEISSFESTINGKEIT UND NIEDRIGE REIBUNG
Solid Carbide K10 Micro grain with coating only on the first part of the drill.
The coating TiAlN Futura Plus Multilayers, settled with PVD process, ensures excellent wear resistance and low friction

RECORD **4 S i**

Vollhartmetall-Bohrer 4S i, X-förmig, 130°-Spitzen-Geometrie, Entwickelt zum Bohren in kurzspanenden Materialien, Aluminiumlegierungen, Gusseisen und NE-Materialien. Hohe Qualität, enge Bohrungstoleranzen und sehr gute Oberfläche Qualität.

Solid carbide 4S i drills, X-shaped, 130° point geometry are designed for drilling in aluminium alloys, cast iron and non-ferrous materials. Best suited for high quality, close tolerance holes that require a very good surface finish.

GERADE GENUTET MIT ZWEI SCHNEIDEN
Two cutting edges with straight flutes

GENAUE FORM DES LOCHS, AUCH WENN FÜR KOMPLEXE GEOMETRIEN STUFENBOHRER VERWENDET WERDEN
Precise shape of the hole even if used as geometry for complex step drills

KANN ZUM AUFBOHREN VERWENDET WERDEN, ENTWORFEN MIT VIER FÜHRUNGSFASEN
Can be used in cored holes, four margin lands design

DURCH DIE ZWEITE FÜHRUNGSFASE ERHALTEN WIR BESSERE OBERFLÄCHEN QUALITÄT UND GENAUERE BOHRUNGSTOLERANZEN
Second set of margin lands improves the surface quality obtaining more precise tolerances.

KANN DURCH QUERBOHRUNGEN UND AUF GENEIGTEN FLÄCHEN AUSTRETEN
Can run through cross holes and exit on inclined surfaces.

VERSCHLEISSFESTES VHM K20F QUALITÄT
Wear resistant carbide K20F Quality

VOLLHARTMETALL-FEINSTKORN K20F MIT TF MEHRLAGEN BESCHICHTUNG IN TIALN FUTURA PLUS-PVD SORGT FÜR EINE HERVORRAGENDE VERSCHLEISSFESTIGKEIT UND GERINGER REIBUNG. GEOMETRIE ENTWICKELT ZUM BOHREN IN SPHÄROGUSS UND ALUMINIUM MIT HOHEM SILIZIUMGEHALT. BESTEN GEEIGNET FÜR HOHE QUALITÄT, ENGE BOHRUNGSTOLERANZEN UND SEHR HOHE OBERFLÄCHEN QUALITÄT
Solid carbide micro-grain K20F with TF multilayer coating in TiAlN Futura Plus PVD ensures excellent wear resistance and low-friction on spheroidal cast iron and aluminium with a high silicon content materials.

DER UNBESCHICHTETE VHM K20F HILFT ZU VERHINDERN AUFBAU SCHNEIDEN BEIM BOHREN VON ALUMINIUMWERKSTOFFEN
The uncoated K20F grade helps to prevent build-up edge (BUE) in drilling aluminium materials.

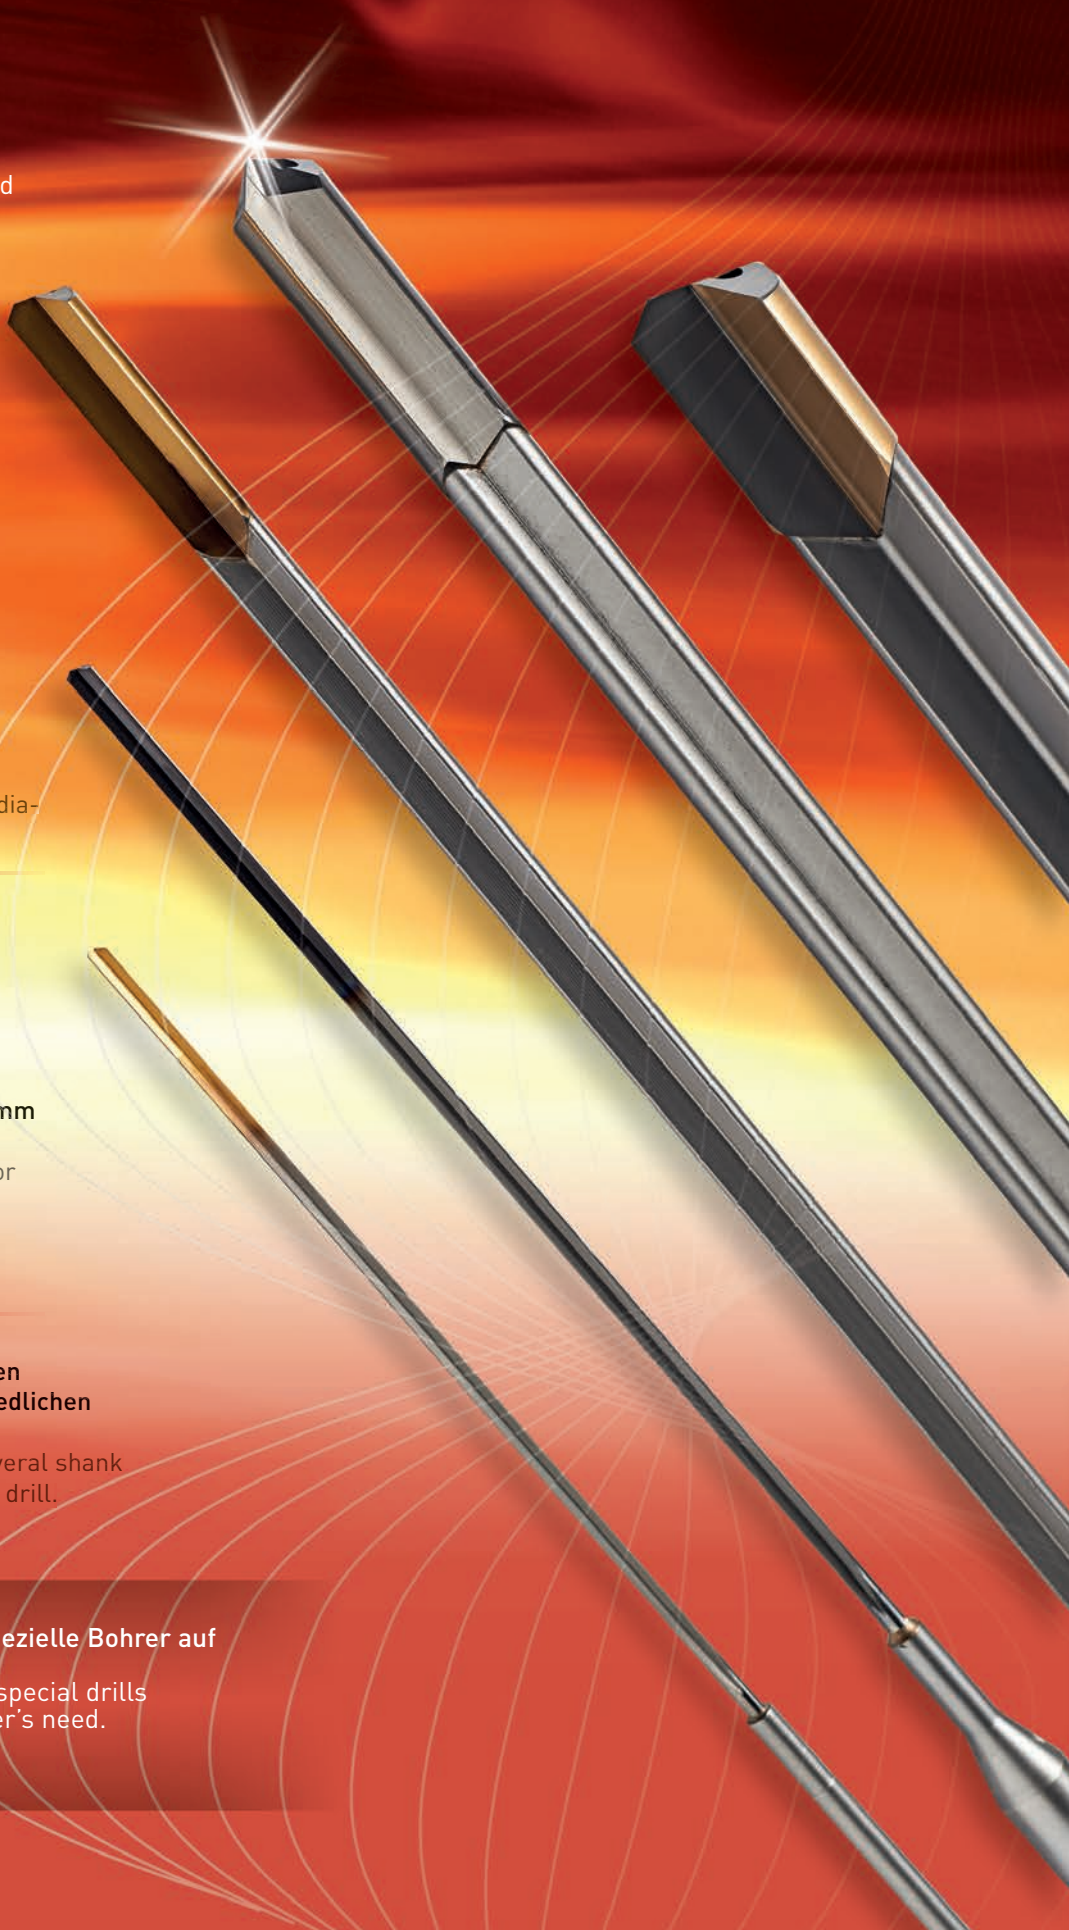
Einlippenbohrer
Gun drills

ILIX liefert auch Einlippenbohrer auf Anfrage in VHM oder mit Hartmetall gelöteten Bohrkopf.

ILIX can provide gun drills for deep hole on demand, both in solid carbide and with carbide brazed head.



Produkt Typen
Types of products

SONDERANSCHLIFF
SINGLE POINT DRILLS

Mit verschiedenen Schneidgeometrien je nach Werkstoff. Von Bohrdurchmesser 0.5 mm bis 50 mm.
With different cutting geometries, depending on workpiece material. This kind of drills is available from diameter 0.5 mm to 50 mm.

ZWEI NUTEN MIT DOPPELTER FÜHRUNGSFASE.
TWO FLUTED DRILLS

Geeignet für höhere Vorschübe. Dieser Bohrer eignet sich für kurzspanige Materialien. Durchmesserbereich 4 mm bis 25 mm
They allow you to get a better feed rate. This kind of drills is suitable for short–chip materials. It's available a range from diameter 4 mm to 25 mm.

Beide Ausführungen sind mit einigen Schaftausführungen und unterschiedlichen Längen erhältlich.
Both versions are available with several shank fixtures and different lenghts of the drill.

Darüber hinaus ist es möglich, spezielle Bohrer auf Anfrage zu bekommen.
Furthermore, it is possible to get special drills on request - according to customer's need.

RECORD **STL i**

Rekord STLi Vollhartmetallbohrer bieten die höchsten Spanleistungen in Stahl,Gusseisenwerkstoffe und Titanlegierungen. Record STLi VHM mit innen Kühlung sind erhältlich in längen 7/8xD.

Record STLi solid carbide drills offer the highest metal removal rates in steel, stainless steel ,cast iron materials and titanium alloys.
Record STLi solid carbide drills are available with internal coolant in 7/8xD lengths.

GEOMETRIE STL
Geometry STL

NIEDRIGER DRUCK VERHINDERT WERKSTÜCKDURCHBIEGUNG
Low thrust prevents workpiece flexing

EXZELLENTE ZENTRIERFÄHIGKEIT
Excellent centring capabilities.

EINZIGARTIGES NUTENPROFIL
Unique flute design

GROSSER SPANRAUM FÜR EINE EFFIZIENTE UND SCHNELLE SPANABFUHR
Large chip pockets for an efficient and fast chip evacuation

QUALITÄT K30F
Quality K30F

VHM FEINSTKORN K30F MIT TEIL TP BOHRSPITZEN BESCHICHTUNG IN PVD SORGT FÜR NIEDRIGE REIBUNG UND STABILITÄT AUCH IN DER MINIMALMENGENSCHMIERUNG (MMS) ANWENDUNG
Solid carbide micro-grain K30F with partial TP drill point coating in PVD Tin ensures low-friction and stability even in minimum quantity lubrication (MQL) applications

RECORD **3 S - 3 SX**

Rekord 3S Vollhartmetallbohrer sind ideal für hohe Zerspanungsleistung und bieten ausgezeichnete Lochqualität in kurzspanenden Werkstoffen wie Grauguss, Sphäroguss Stahl, Aluminium, sowie kurze Bohrtiefen in Titanlegierungen.

Record 3S solid carbide drills are ideal for high metal removal rates and offer excellent hole quality in short chipping materials such as, grey cast iron, ductile iron and aluminium.

DREI SCHNEIDEN FÜR EINE HÖHERE VORSCHUBGESCHWINDIGKEIT ALS MIT EINEM ZWEISCHNEIDIGEN BOHRER
Three cutting edges for a higher feed rate than with two edged drills.

DREI GROSSE SPANNUTEN FÜR EINE SCHNELLE SPANABFUHR
Three large chip pockets for a fast chip evacuation

DREI FÜHRUNGSFASEN LIEFERN BESSERE LOCHQUALITÄT ALS ZWEI FÜHRUNGSFASEN- BOHRER
Three margin lands deliver better hole quality than two-flutes drills.

QUALITÄT TF MIT TIALN-BESCHICHTUNG, VERBESSERT DIE VERSCHLEISSFESTIGKEIT BEI HOHEN SCHNITTGESCHWINDIGKEITEN
Quality TF with TiAlN coating, improves wear resistance at high cutting speeds.

DIE UNBESCHICHTETE K10 KLASSE HILFT DIE AUFBAUSCHNEIDE ZU VERHINDERN. ZUM BOHREN IN ALUMINIUM UND HOCHLEGIERTE STÄHLE
The uncoated K10 grade helps to prevent build-up edge (BUE) in drilling aluminium and high temperature alloys

PKD

ILIX erweitert sein Programm um eine Diamantbeschichtung im VHM Spiralbohrerbereich um den hohen Anforderungen zu entsprechen, die in der Automobil- und Luftfahrtindustrie gefordert werden.

ILIX increases its wide range of innovative solutions for drilling adding a solid carbide drill with polycristalline diamond to face up to the new automotive and aerospace market's requirements.

RECORD **AG Drill**

Das Record AG Drill system wurde erweiterte für Bohrungstiefen 3xD, 5xD und 7xD im Bohrdurchmesser bis 40 mm. Für die schwierigsten Anwendungen sind Wechselplatten Typen verfügbar.

The Record AG Drill system offers extended lengths and drilling diameters. Hole lengths 3xD, 5xD and 7xD are standard cover drilling diameters till 40 mm. Various grades are available for the most difficult applications.

RECORD **AG Drill**

WECHSELPLATTEN / INSERTS

Spitzengeometrien und Beschichtungen der Wechselplatten sind für eine Vielzahl von Anwendungen, sowohl in metallischen als auch in nicht metallischen Werkstoffen, kurz- oder langspanend ausgelegt und führen, auch durch ihre selbstzentrierende Auslegung, zu besten Ergebnissen.

Geometries and coatings of the inserts are designed for machining a big variety of ferrous and non ferrous materials, short and long chipping. The special design and the self centering characteristics produce satisfying results in all applications.

GTRD - DHTR

GTRD und DHTR Wendeplattenbohrer wurde konstruiert zum Bohren 3xD und 8xD in Stahl, Edelstahl, Grauguss, Sphäroguss und NichteisenmetallGTRD Serie hat einen Durchmesserbereich von 16 bis 50 mm.DHTR Serie hat einen Durchmesserbereich von 25 bis 45 mm.

GTRD and DHTR indexable drills are engineered for drilling 3xD e 8xD in steel, stainless steel, grey cast iron, spheroidal cast iron and non-ferrous material applications.
GTRD series covers a diameter range from 16 to 50 mm.
DHTR series covers a diameter range from 25 to 45 mm.

PRODUKTIVITÄT
Productivity

DANK EINES GUT ZENTRIERENDEN PILOTBOHRER WIRD EINE HOHE STABILITÄT UND GERADLINIGKEIT BEI BOHREN GESICHERT
Achive high stability and hole straightness thanks to a centered pilot drill that offer better centering capabilities

PROFITIEREN SIE VON DER KAMMERGEOMETRIE, DIE EINE HERVORRAGENDE SPANABFUHR UND LANGE LEBENSDAUER DES WERKZEUGKÖRPER SICHERSTELLT.
Benefit from the flute geometry that ensures an excellent chip evacuation and a long tool body life

IDEAL AUCH FÜR ÄLTERE MASCHINEN DIE EINEN NICHT SO STARKEN MOTOR HABEN KÖNNEN MIT REDUZIERTEM VORSCHUB UND SCHNITTGESCHWINDIGKEIT EIN GESETZTE WERDEN
Ideal for older or low-power machines, due to reduced feed and cutting speed capabilities.

VIELSEITIGKEIT
Versatility

PLATTEN GEOMETRIEN UND EIGENSCHAFTEN FÜR EINE VIELZAHL VON MATERIALIEN.
Insert geometries and qualities for a wide range of materials.

HSS-CO TIN- BESCHICHTUNG, PILOTBOHRER SIND VERFÜGBAR
HSS-Co TiN-based PVD coating pilot drill available

DHMTR

DHTR Wendeplattenbohrer zum Bohren 10 x D in Stahl, Edelstahl, Grauguss , Sphäroguss und NE-Werkstoff entwickelt. DHTR Serie deckt einen Durchmesserbereich von 45 bis 130 mm ab.

DHMTR indexable drills are engineered for drilling up to 10xD in steel, stainless steel, grey cast iron, spheroidal cast iron and non-ferrous material applications. DHMTR modular series covers a diameter range from 45 to 130mm.

WENDEPLATTENBOHRER IM BAUKASTENSYSTEM
Indexable drills modular system

BREITE PALETTE VON DURCHMESSERN VON 45 BIS 130 MM UND STANDARD-BOHRKÖPFE
Wide range of diameters from 45 to 130 mm and standard drill heads

TRIGON WCEX EINSÄTZE BIETEN DIE BESTEN FÄHIGKEITEN ZENTRIERUNG AUF DIE INNEREN UND ÄUSSEREN PATRONEN FÜR VERBESSERTE OBERFLÄCHENQUALITÄT
Trigon WCEX inserts provide the best centering capabilities on inboard and outboard cartridges for improved surface hole quality

VERSCHIEDENE PLATTENGEOMETRIEN UND QUALITÄTEN ALS STANDARD VERFÜGBAR
Various insert geometries and qualities available as standard

MÖGLICHKEIT DER ANPASSUNG FÜR BOHRTIEFE UND DURCHMESSERBEREICH MIT ERWEITERUNGEN UND REDUZIERUNGEN
Possibility of adjusting drilling depth and diameter range with extensions and reducers

DURCHMESSERVERSTELLUNG DURCH VERKÜRZUNG DER AUSSEN PATRONE
Diameter adjustment by shortening outer cartridge

BOHRKÖPFE BIS ZU 180 MM AUF ANFRAGE
Drilling heads up to 180 mm available upon request

Form A und B, Ausführung „mittel“
Für Durchgangslöcher nach **DIN-ISO 273** und Senkungen nach **DIN 74, Teil 1,**
für Schrauben nach **DIN 963 – 964 – 965 – 966 - 7513 (F und G) 7516 (D und E) – 7991**
Form A und B, medium grade
For through holes acc. to **DIN-ISO 273** and screwheads to **DIN 74, part 1,**
for screws to **DIN 963 – 964 – 965 – 966 - 7513 (F and G) 7516 (D and E) – 7991**

Form B, Ausführung “mittel”
Für Durchgangslöcher nach **DIN-ISO 273** und Senkungen nach **DIN 74, Teil 1,**
für Schrauben nach **DIN 7991**
Form B, medium grade
For through holes acc. to **DIN-ISO 273** and screwhead countersinks acc. to
DIN 74, part 1, for countersunk screws acc. to **DIN 7991**

Form A, Ausführung “fein”
Für Durchgangslöcher nach **DIN-ISO 273** und Senkungen nach **DIN 74, Teil 1,**
für Schrauben nach **DIN 963– 964–965–966–7513 (F und G)–7516 (D und E)**
Form A, fine grade
For through holes acc. to **DIN-ISO 273** and screwhead countersinks acc.
to **DIN 74, part 1**, for screws acc. to **DIN 963 – 964 – 965 – 966 – 7513**
(F and G) – 7516 (D und E)

Multi Rapid **VA** & Multi **VA**

Multi Rapid VA und Multi VA HSS Co-PM bieten eine bessere Stabilität und Zuverlässigkeit zur Bearbeitung von rostfreien Stählen.
Neue Geometrie sichert eine bessere Spankontrolle.

Multi Rapid VA and Multi VA HSS Co-PM taps offer better stability and reliability on stainless steel material.
New geometries ensure better chip control.

ANSCHNITT FORM B IST FÜR DUCHGANGSLOCH UND ANSCHNITT FORM C IST FÜR SACKLOCH GEWINDE
Form-B chamfer for through hole and Form-C chamfer for blind hole tapping

SPANWINKEL SPEZIELL KONSTRUIERT FÜR HOCHLEGIERTE CHROM STÄHLE
Rake angle specifically designed for high Chrome materials

SPANNUTENWINKEL 0 ° UND 50 ° FÜHRT ZU GERINGEREN SCHNITTKRÄFTEN, GERINGER SCHNITT TEMPERATUREN, SICHERE UND SCHNELLE SPANABFUHR.
Flute angle 0° and 50° results in lower cutting forces and reduced cutting temperatures and ensures a fast and efficient chip evacuation rate

QUALITÄT HSS CO-PM
Quality HSS Co-PM

TICN-BASIERTE PVD-BESCHICHTUNG MIT HOHER VERSCHLEISSFESTIGKEIT UND GERINGE HAFTUNG ZUR AUFSCHWEISSUNGEN DES ZU BEARBEITENDEN MATERIAL.
TiCN-based PVD coating with high wear resistance and low adhesion to abrasive steels

GEEIGNETE ZUM ARBEITEN MIT STARREN SPANNSYSTEMEN
Suitable for rigid tapping machining

ILIX® PRECISION

DIN 371

Maschinen-Gewindebohrer mit verstärktem Schaft für Metrisches ISO-Regelgewinde nach DIN 13
Machine taps with reinforced shank for ISO metric coarse thread acc. to DIN 13 - New Geometry

Multi Rapid **HD** & Multi **HD**

Multi Rapid und Multi HD HSS Co-PM bietet bessere Stabilität und Zuverlässigkeit zur Bearbeitung von Material bis zu 800 N/mm².

Multi Rapid HD and Multi HD HSS Co-PM taps offer better stability and reliability on materials with tensile strength up to 800 N/mm².

ANSCHNITT FORM B IST FÜR DUCHGANGSLOCH UND ANSCHNITT FORM C IST FÜR SACKLOCH GEWINDE
Form-B chamfer for through hole and Form-C chamfer for blind hole tapping

SPANWINKEL SPEZIELL KONSTRUIERT FÜR MATERIAL MIT NIEDRIGER BIS MITTLERER FESTIGKEIT.
Rake angle specifically designed for medium to high mechanical strength materials

SPANNUTENWINKEL 0 ° UND 40 ° FÜHRT ZU GERINGEREN SCHNITTKRÄFTEN UND SICHERE SCHNELLE UND LEISTUNGSFÄHIGE SPANABFUHR
Flute angle 0° and 40° results in lower cutting forces and ensures a fast and efficient chip evacuation rate

QUALITÄT HSS CO-PM
Quality HSS Co-PM

TIN-BASIS PVD-BESCHICHTUNG HAT EINE SEHR GUTE VERSCHLEISSFESTIGKEIT UND SPANABFUHR.
TiN-based PVD coating provides very good wear resistance and chip flow

GEEIGNETE ZUM ARBEITEN MIT STARREN SPANNSYSTEMEN
Suitable for rigid tapping machining

Multi **RAPID HDi** & Multi **HDi**

HSS Co-PM Multi Rapid HDi und Multi HDi Gewindebohrer entwickelt für höhere Sicherheit bei höherer Schnittgeschwindigkeit, dank der Innenkühlung eine bessere Spanabfuhr und Temperaturkontrolle an der Schneide.

HSS Co-PM Multi Rapid HDi and Multi HDi taps are engineered for ensuring a better reliability when tapping at higher cutting speeds, thanks to coolant channels that ensure better chip evacuation and temperature control in the cutting zone.

ANSCHNITT FORM B IST FÜR DUCHGANGSLOCH UND ANSCHNITT FORM C IST FÜR SACKLOCH GEWINDE
Form-B chamfer for through hole and Form-C chamfer for blind hole tapping

SPANWINKEL SPEZIELL ENTWICKELT FÜR MATERIALIEN MIT MITTLERE UND HOHE MECHANISCHE FESTIGKEIT.

MULTI **GG**

HSS-Co-PM Gewindebohrer Multi GG Serie sind speziell für hohe Schnittgeschwindigkeit in allen Gusseisenwerkstoffe entwickelt.
Die geraden Nuten bieten ein besseren Drehwiderstand während des Schneidprozesses.

HSS-Co-PM taps Multi GG series are specifically engineered for high speed tapping on all cast iron types, the straight flutes offer a better torsional-resistance during the cutting process.

ANSCHNITT FORM C FÜR DURCHGANGS.- UND SACKLOCH GEWINDE
Form-C chamfer for both through and blind holes

METRISCHE UND METRISCHFEIN GEWINDEABMESSUNG
Metric and Metric fine threading range

QUALITÄT HSS-CO-PM
Quality HSS Co-PM

DIE NITRIERTE OBERFLÄCHENBEHANDLUNG BIETET AUSGEZEICHNETE VERSCHLEISSFESTIGKEIT IN DER TROCKENEN UND NASSEN ANWENDUNG
Nitriding surface treatment offers excellent wear resistance in dry and wet tapping

IDEAL FÜR GRAU.- UND KUGELGRAPHITGUSSEISENWERKSTOFFE
Ideal for grey and spheroidal cast iron materials

ILIX® PRECISION

MULTI **GGi**

HSS Co-PM Gewindebohrer Multi GGi Serie sind speziell für hohe Schnittgeschwindigkeit in allen Gusseisenwerkstoffe, die geraden Nuten bieten ein besseren Drehwiderstand während des Schneidprozesses, ferner hilft die Innenkühlung den Span besser zu evakuieren und regelt Temperatur in der Schneidzone.

HSS Co-PM taps Multi GGi series are specifically engineered for high speed tapping on all cast iron types, the straight flutes offer a better torsional-resistance during the cutting process, furthermore the internal coolant helps along the chip evacuation and controls temperature in the cutting zone.

Ni

Ni HSS-Co-PM Gewindebohrer speziell für hitzebeständige Materialien in der Luftfahrt Industrie entwickelt.
ILIX 10 Grad spiral getutet Gewindebohrer aus dieser Reihe sind mit Spanbrecher zur Verbesserung der Spankontrolle, dieses ermöglicht die Anwendung der Gewindebohrer in Sack.- u. Durchgangslöcher.

Ni HSS-Co-PM taps are specifically engineered for tapping heat resistance materials in aerospace and energy industry.
ILIX 10 degrees taps from our range are provided with chipbreaker for improving the chip control, this allows the use of these taps for both blind and through holes applications.

TYPISCH FÜR DIE LUFTFAHRTINDUSTRIE SEHR GENAUE TOLERANZEN.
Very precise tolerances typical of the aerospace industry.

QUALITÄT HSS-CO-PM
Quality HSS-Co-PM

GELÄPPTE OBERFLÄCHE REDUZIERT DIE REIBUNG.
Lapping surface treatment reduces the friction rates.

IDEAL FÜR NICKEL UND TITAN BASIS LEGIERUNGEN.
Ideal for Nichel.

ILIX® PRECISION

MULTI **TP**

Multi TP VHM Gewindebohrer in besonders fester Ausführung zur Bearbeitung von Materialien mit einer Härte über 50 HRc.

Solid carbide taps for tapping in materials with a hardness over 50 HRC.

QUALITÄT VHM
Quality Solid Carbide

DIE NEUE GENERATION VON VHM SORTEN ULTA - FEINSTKORN VERLEIHEN DEM GEWINDEBOHRER EINE GUTE STABILITÄT UND LANGE STANDZEIT.
Latest generation SINTERED STEEL. Very good stability and longer tool life, thanks to the ultra-fine granulometry.

OBERFLÄCHEN BESCHICHTUNG:
DIE ANWENDUNG NEUER FERTIGUNGSTECHNOLOGIEN FÜHREN ZU BESCHLEUNIGTEN PRODUKTIONSPROZESSEN. DIE TICN BESCHICHTUNG GIBT DEM WERKZEUG EINE BESSERE FESTIGKEIT UND HÖHERE STANDZEITEN BEIM EINSATZ IN HOCHLEISTUNGSMASCHINEN.
Surface coating:
New production technologies have sped up production cycles. The TiCN coating gives higher tenacity and wear resistance to the tool when used in high performance machines.

FORMER **PM - PM i**

Maschinen-Gewindeformer HSS Co-PM (gesintert) sind entwickelt für den Einsatz hoher Schnittgeschwindigkeit, eine hohe Produktivität und zuverlässige Qualität der Gewinde zu erzeugen. Haben eine hohe Beständigkeit gegen Verschleiß und Hitze. Die HSS-Co-PM Gewindeformer können auch auf CNC-Maschinen für das synchron Formen verwendet werden.

Machine thread former HSS co-PM (sintered) are developed for the use of high cutting speed, high productivity and reliable quality of thread to produce. Have a high resistance to wear and heat. The HSS-Co PM Thread formers can also be used on CNC machines for the synchronous forms.

GEWINDE HERSTELLUNG DURCH PLASTISCHE VERFORMUNG STATT MATERIALABTRAG.
KEINE SPANBILDUNG.
Thread obtained by plastic deformation instead of material removal.
No chip formation, therefore:

- SICHERE UND ZUVERLÄSSIGE GEWINDEPROZESS
- Secure and reliable tapping process
- DIE MÖGLICHKEIT, BEIDE GEWINDE SACK.- U. DURCHGAGSGEWINDE MIT DEM GLEICHEN FORMER ZU ERSTELLEN.
- Possibility to thread both blind and through holes with the same tap
- GROSSE AUSWAHL AN MATERIALIEN: STAHL <1000 N / MM2, ALUMINIUM, NICHT - EISEN METALLE-
Wide range of working materials: Steel <1000 N/mm2, Aluminium, Non Ferrous materials
- GROSSE GEWINDETIEFE AUCH FÜR SACHLÖCHER
- High tapping depth also on blind holes
- HOHE STANDZEIT
-High tool life

HÖHERE SCHNITTGESCHWINDIGKEIT IM VERGLEICH ZUM GEWINDESCHNEIDEN
Higher cutting speed compared to cutting taps

BESSERE OBERFLÄCHENQUALITÄT AM GEWINDE
Better surface quality on thread

DIE GEWINDEFORMER MIT TIN ODER TIALN BESCHICHTUNG HILFE DIE STANDZEIT ZU ERHÖHEN.
The forming taps TIN or TiAlN coated help to increase the tool life

GERINGE BRUCHGEFAHR DANK GRÖSSEREN KERNDURCHMESSER
Low risk of breakage , thanks to larger core diameter

GEWINDEBOHRER **VHM - SOLID CARBIDE** TAPS

Mit dem Ziel unter schnell wechselnder mechanischer und thermischer Beanspruchung Bearbeitungszeiten und Leistung zu optimieren, hat ILIX eine neue Generation von Gewindewerkzeugen aus fortschrittlichen Materialien entwickelt.
Die Eigenschaften sind auf Leistungssteigerung und somit auf Minimierung der Maschinenbelegungszeiten ausgerichtet.

To optimize all aspects of machining under rapidly changing mechanical and thermal stress.
ILIX has pioneered a new generation of threading tools from advanced materials.
Their characteristics aim towards higher performance and hereby reduction of machine assignment time.

DIE NEUEN HOCHLEISTUNGSGEWINDEBOHRER AUS VHM K20 ERMÖGLICHEN STABILE UND KONTROLLIERTE GEWINDEBEARBEITUNG IN PRÄZISIONSANWENDUNGEN.
The new high performance taps produced from ultrafine K20 allow stable and controlled threading processes in high precision applications.

GEWINDEFRÄSER / THREAD MILLING CUTTERS

MULTI TM, TM AERO, CTM, DTM, TP e MICRO

VHM-Gewindefräser ausgelegt zur Herstellung guter Gewindequalität und präziser Toleranzen bei niedrigen Schnittgeschwindigkeiten. Gute Prozess Wiederholbarkeit und sehr hohe Zuverlässigkeit. Ideal für die Bearbeitung aller Materialien, aus Stahl, Gusseisen, speziell für hitzebeständige Legierungen und Aluminium.

Solid carbide thread milling cutters designed for reducing cutting speeds, producing short chips, obtaining very precise threading qualities and tolerances. These end mills are suitable in working conditions demanding reliability and process repeatability.
Ideal for machining all materials, from steel to cast iron and specifically for heat resistance alloys and aluminium.

Um größere Profilüberfräsungen zu vermeiden, darf der Fräser-Ø für Feingewinde nicht größer als 2/3 des zu fräsenden Gewinde-Ø sein.
To avoid too deeply milled profiles, the thread mill Ø must not exceed 2/3 of the Ø of thread to be milled.

ILIX NORM

Maschinen-Gewindebohrer, extra lang, 40° Rechtsdrall
für Metrisches ISO-Gewinde nach DIN 13
ca. doppelte Gesamtlänge wie DIN 371

Machine taps, extra long
for ISO metric coarse thread as per DIN 13
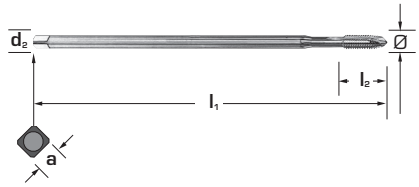
approx. double total length of DIN 371



Typ / Type								N
Toleranz Tolerance								6 H
Anschnitt / Gangzahl Chamfer form / No. of threads								B/4-5
Schneidrichtung Cutting direction								
Schneidstoff/ Material								HSS-Co

Anwendungshinweis

- Die Tabelle wurde so aufgebaut, dass jeder Reibahlendurchmesser mit einem 1/100 mm Stufensprung bestimmt werden kann. In den Zuschlagswerten wurden die Herstellungstoleranzen berücksichtigt
  - Ø 5,5 mm + 0,004 / + 0,0
  - > Ø 5,5 mm + 0,005 / + 0,0

Notes for use of above table

- This table allows the selection of chucking reamers with diameters within steps of 0,01mm. The given values take the basic manufacturing tolerances as standard into consideration.
  - Ø 5,5 mm + 0,004 / + 0,0
  - > Ø 5,5 mm + 0,005 / + 0,0

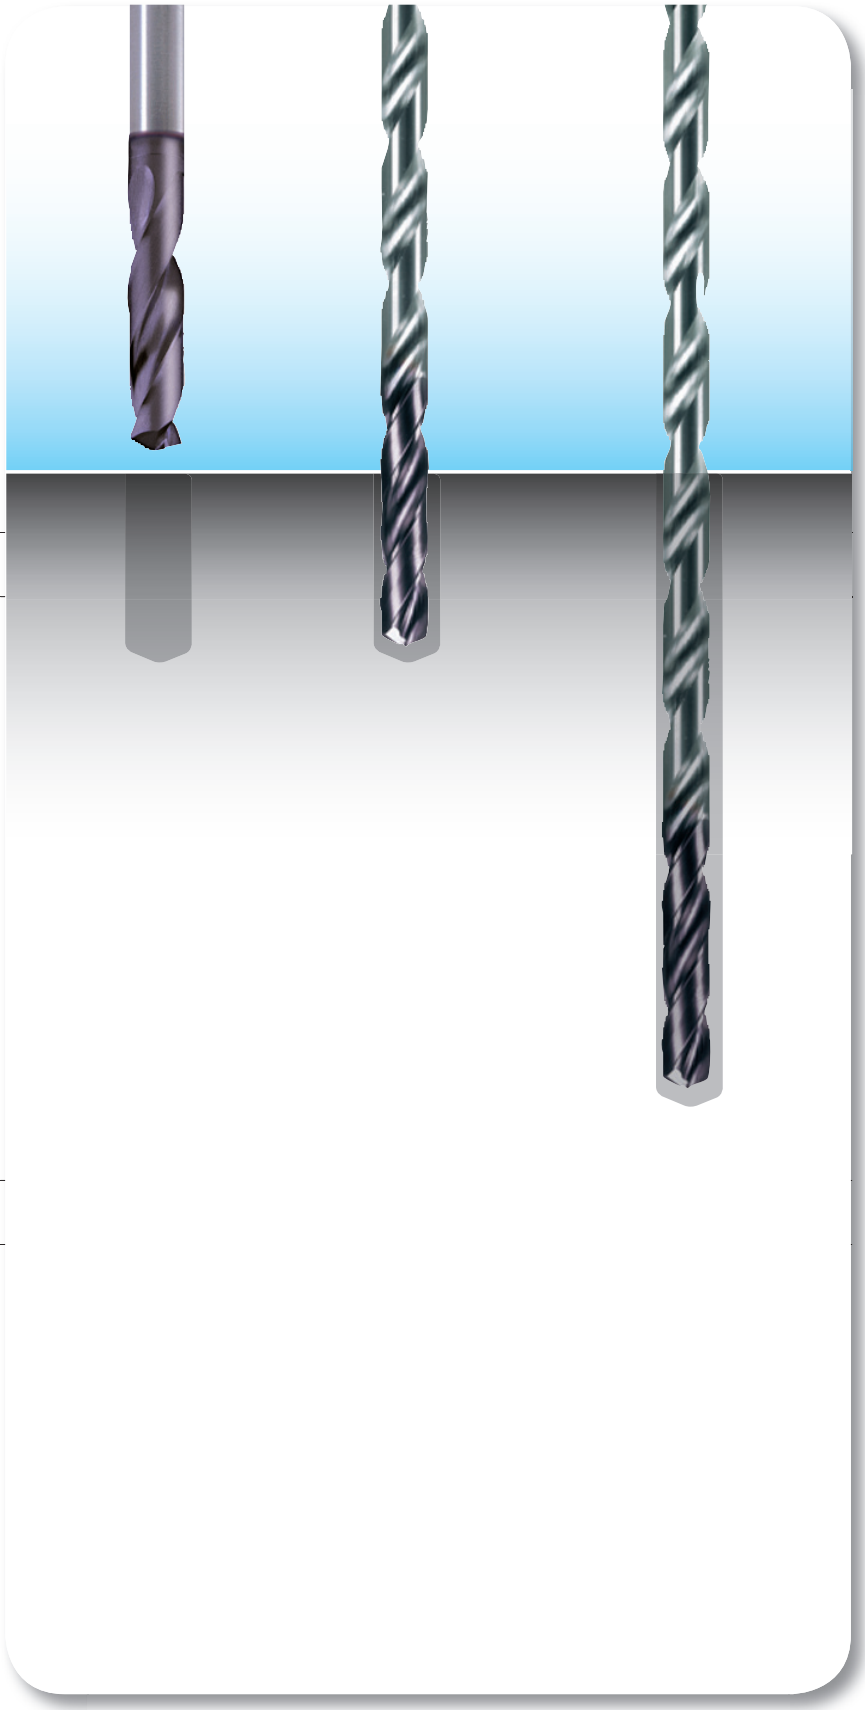
TECHNISCHE ANWENDUNG / TECHNICAL SUGGESTIONS
RECORD DHi

ANWENDUNGSEMPFEHLUNG ZUM BOHREN VON TIEFEN BOHRUNGEN BIS 40 X D MIT DH I

- Erforderlich ist eine Rundlaufgenauigkeit der Spindel und genügender Kühlmitteldruck
- Ein 3XD Bohrer ist für eine Pilotbohrung von 1-1,5xd geeignet
- Einsatz von 20XD, 30XD oder 40XD Bohrer anfang mit niedriger Drehzahl u. Vorschub, normalerweise bohren ohne entspänen, vorausgesetzt die Späne kommen gut aus dem Werkzeug.

SUGGESTIONS TO PERFORM DEEP HOLES UP TO 40XD WITH **DHi**

- It is required a high concentricity of the spindle and enough pressure of the internal coolant.
- A Drill 3xD is recommended to create a pilot hole from 1-1,5xD.
- Using drills 20xD, 30xD or 40xDz start up with cow speed and feed. Usually drilling without interruption, a good chipremaval is guaranteed.
  Let the internal coolant flow when inside the hole.



Die Parameter gelten für Durchgangsbohrungen. Bei Querbohrungen oder Ein- und Austritt auf schräger Fläche müssen diese Werte mit dem Reduzierfaktor 0,5 multipliziert werden. Mindestkühlmitteldruck 10 bar.

The parameters are valid for through holes. When crossing holes or entering and leaving on angled surfaces, reduce by 50%. Minimum coolant pressure 10 bar.

VORAUSSETZUNG ZUM GEWINDEFRÄSEN
REQUIREMENTS FOR THREAD MILLING

MASCHINE / MACHINE

- **3 achsige CNC Maschine /** CNC machine with 3 axis control
- **Hohe Drehzahl bis 15.000 U/min /** High speed up to 15.000 r/min
- **Konzentrizität <–= 0,015 mm, je höher die Abweichung der Konzentrizität, desto kürzer die Standzeit des Werkzeugs**
  Concentricity < = 0,015 mm, the bigger the error, the shorter the tool life
- **Kühlmittelzufuhr durch die Spindel /** Coolant supply through spindle

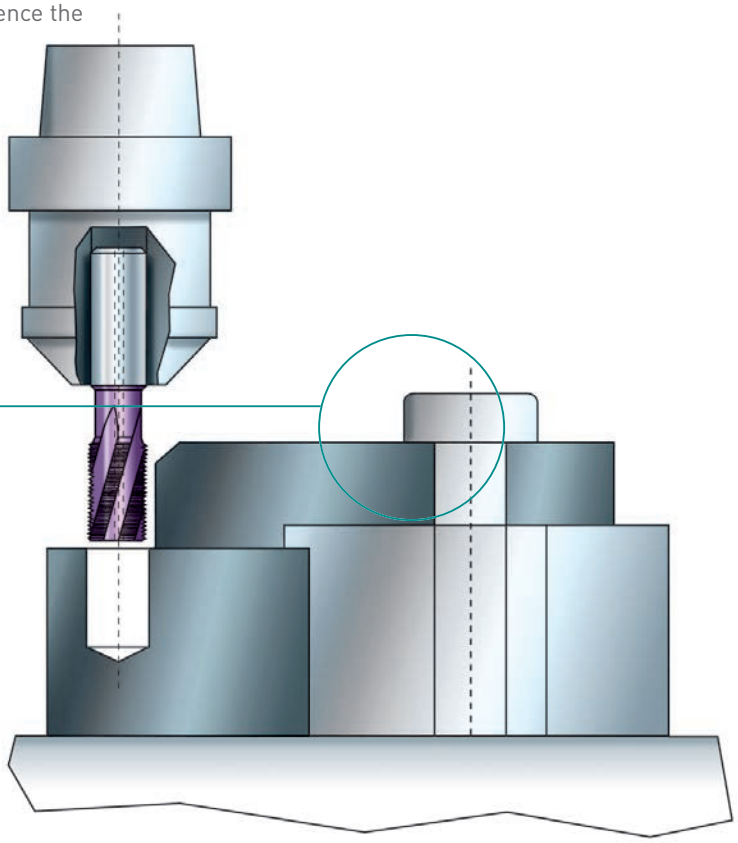
WERKSTÜCK / WORKPIECE

- **Möglichst stabile Werkstückaufspannung /** Workpiece clamping as stable as possible
- **Störung der Werkzeugbewegung vermeiden**
  Avoid interference with the movement of the tool

BEISPIEL SCHLECHTER WERKSTÜCKAUFSPANNUNG
EXAMPLE FOR BAD WORKPIECE CLAMPING

In einer solchen Situation kann die Interferenz zwischen Werkzeug und Werkstück lediglich durch einen verlängerten Schaft vermieden werden. Die Stabilität des Prozesses wird negativ beeinflusst.

In such a situation the interference of the tool with the workpiece can only be avoided by using a prolonged shank. This will influence the stability of the process negatively.

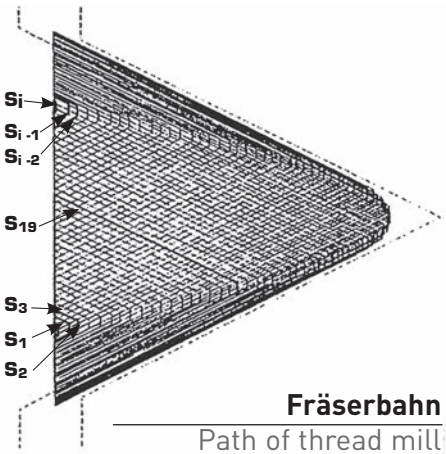


TEORETISCHE GRUNDLAGEN DES GEWINDEFRÄSENS

THEORETICAL BASIS OF THREAD MILLING

Ein konventionell hergestelltes Gewinde entsteht durch die Abbildung des Gewindebohrer- oder Formerprofils im Werkstück.
During conventional tapping the form of the tap is reproduced within the workpiece.

Beim Gewindefräsen erzeugt die Aneinanderreihung der Schnittlinien des Fräsers das Gewinde. Die Kontur des Gewindeganges wird erstellt, indem das Fräserprofil den Achsschnitt des Gewindegangs wiederholt auf der Spiralbewegung in axialer Werkzeug- und Werkstückrichtung durchfährt.
When treadmilling, the thread is created by using the form of the cutter and the ability of the CNC programme to move both axially and radia



Fräserbahn
Path of thread mill

ENTWURF DES FRÄSERPROFILS
THREAD MILL PROFILE DESIGN

Zur Optimierung des Werkzeugprofils wird die Fräserbahn im zu erzeugenden Gewinde vektoriell mit Hilfe entsprechend ausgelegter CAD/CAM Programme beschrieben.
In order to ensure the threadform is correct, the path of the threadmill is broken down into small vectors which are written into the canned cycle of the CNC programme.

Das Resultat ist das korrigierte Fräserprofil, das durch simuliertes Abfahren der Fräserbahn auf Maßhaltigkeit und Profilexaktheit überprüft wird.
The result is a correct thread profile, however before the threadmilling cycle is run, it is always recommended that a simulation is proved with cutter above the workpiece.

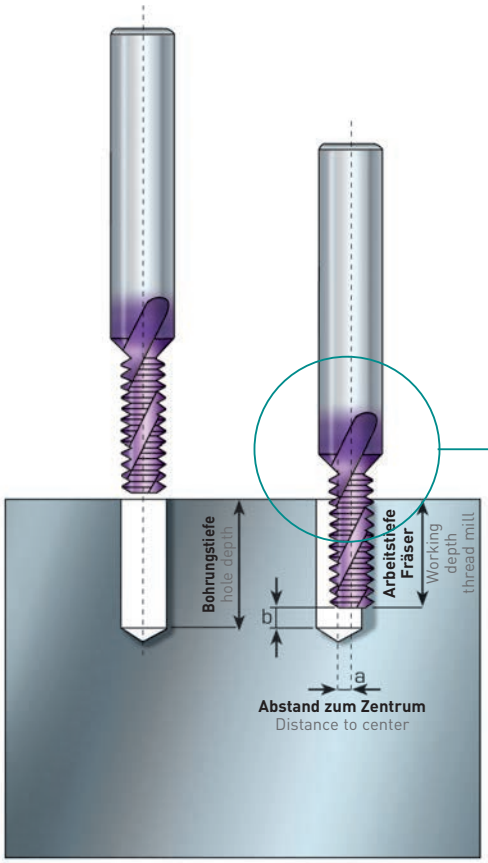
DATEN FÜR DIE PROGRAMMIERUNG ZUM INNENGEWINDEFRÄSEN
PROGRAMMING DATA FOR INTERNAL THREAD MILLING

Um beim Gewindefräsen genaue Ergebnisse betreffend Maßhaltigkeit und Gewindetiefe zu erhalten, müssen verschiedene Daten bei der Maschinenprogrammierung berücksichtigt werden.
In order to achieve exact thread dimensions and depths when thread milling, a variety of data must be considered while programming the machine.

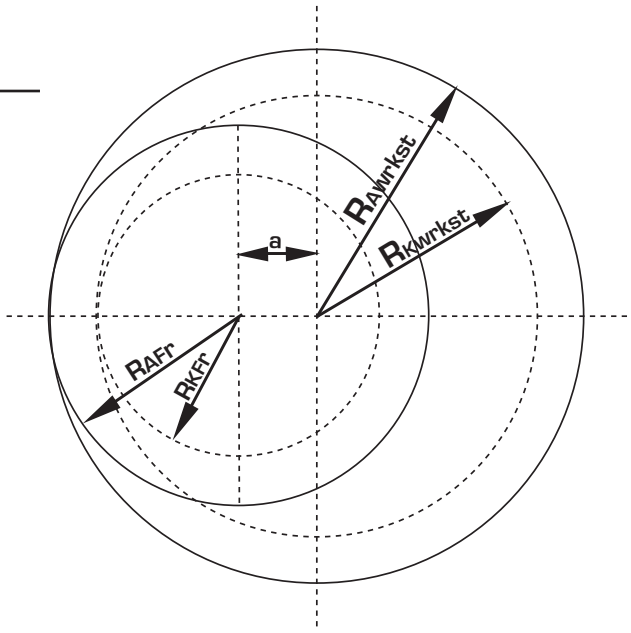


Distanz zum Mittelpunkt a = Werkstückradius
Distance to center a = workpiece radius Rawkrst
Fräserradius / tool radius RaFr
Werkstückradius Rawrkst = Nenn-Ø / 2 + Korrekturfaktor X
workpiece radius Rawrkst = nom. Ø / 2 + correction factor X
Rawkrst = d1 / 2 x fc
Der Fräserdurchmesser ist auf dem Werkzeugschaft zu finden.
The diameter of the thread mill can be found on the shank
Der Korrekturfaktor ist bereits in der CNC Programmierung berücksichtigt.
The correction factor is already considered in the CNC programming.

Gewindetiefe = Bohrungstiefe
Thread depth = hole depth

0,15xSteigung + 1xSteigung + 0,15xSteigung + Abstand b
0,15 x pitch + 1 x pitch + 0,15 x pitch + distance b

0,15xSteigung = 180° Einfahrschleife
0,15 x pitch = 180° immersion loop
1xSteigung = Arbeitsgang 360°
1 x pitch = Machining cycle 360°
0,15xSteigung = 180° Ausfahrschleife
0,15 x pitch = 180° exit loop
Abstand b = Sicherheitsabstand zum Bohrungsgrund
Distance b = Security distance to hole ground

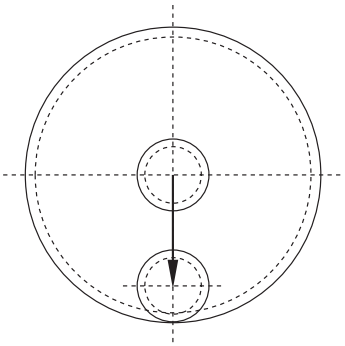


RADIALE ZUSTELLUNG AUF DEN NENNDURCHMESSER ÜBER EINE EINFAHRSCHLEIFE
RADIAL INFEED TO THE NOMINAL DIAMETER VIA ENTRY LOOP

Die radiale Zustellung des Werkzeugs auf den Gewindenenndurchmesser erfolgt über eine sogenannte Einfahrschleife. Dabei wird der Fräser in einem Kreisbogen an den Nenndurchmesser bewegt. Die Bewegung nach der Bearbeitung vom Nenndurchmesser auf Bohrungsmitte erfolgt in der Regel mit einer entsprechenden Ausfahrschleife. / The radial infeed of the tool to the nominal thread diameter is done through an entry loop. The thread mill approaches the nominal diameter through a circular arc. After machining the nominal diameter in the center of the hole the tool leaves through an exit loop.

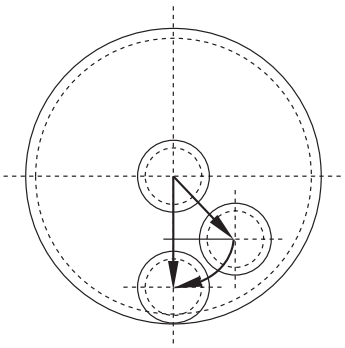
GERADLINIGES EINTAUCHEN / STRAIGHT IMMERSION

Beim geradlinigen Eintauchen des Gewindefräsers in den Werkstoff entsteht ein sehr großer Umschlingungswinkel am Fräser, der zu langen Spänen und einer hohen Werkzeugbelastung führt. Dies ist insbesondere bei einer geringen Durchmesserdifferenz zwischen dem Bohrungsmaß und dem Fräser der Fall. Zudem entsteht mit dieser Methode eine kleine Verweilmarke. Für präzise und auch kleine Gewinde ist diese Methode nicht geeignet. / Straight immersion of the thread mill into the material leads to a high looping angle at the tool resulting in long chips and stress on the tool, especially if the difference between tool and hole diameter is small. This method also leads to a small mark on the thread and is not adequate for small and exact threads.



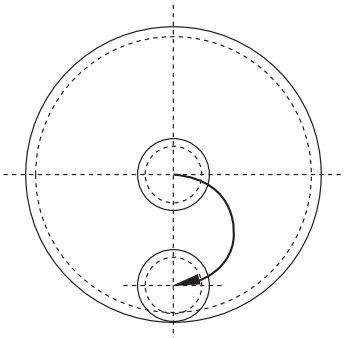
VIERTELKREISEINFAHRSCHLEIFE 90° / 90° ENTRY LOOP

Bei der 90°-Einfahrschleife wird bei einer geringen Durchmesserdifferenz zwischen Werkzeug und Gewinde der größte Teil des Spanvolumens auf dem geraden Teil der Einfahrschleife entfernt. Diese Methode wird deshalb nur für eine verhältnismäßig große Durchmesserdifferenz zwischen Bohrungsmaß und dem Fräser Multi TM empfohlen. Vorteile: einfache Programmierung und relativ kurze Einfahrwege. / Most material is removed on the straight section of the entry loop. This method can only be recommended for relatively big diameter differences of hole and thread mill Multi TM. Advantages: easy programming and short entry loop.



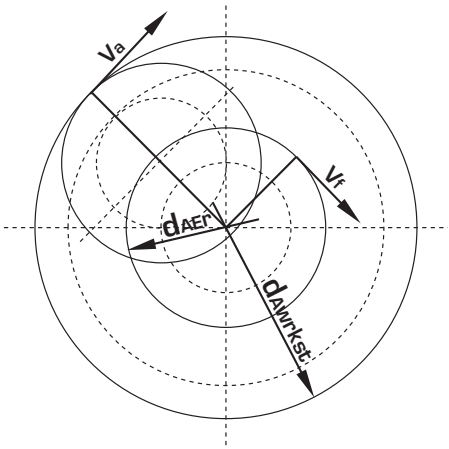
HALBKREISEINFAHRSCHLEIFE 180° / 180° ENTRY LOOP

Bei der 180°-Einfahrschleife ist die Werkzeugbelastung beim Eintauchen am niedrigsten, da der Umschlingungswinkel auf der gesamten Einfahrschleife relativ klein ist. Diese Methode ist programmtechnisch etwas aufwendiger, hat sich aber beim Gewindefräsen mit Gewindefräser TM „RS“ und CTM als am günstigsten erwiesen. / The stress on the tool is lowest when immerging, because the looping angle remains relatively low. The programming is slightly more complicated but has proofed most beneficial for thread milling with TM “RS” and CTM.



BERECHNUNG: SCHNITTGESCHWINDIGKEIT, VORSCHUB UND BEARBEITUNGSZEIT BEIM INNENGEWINDEFRÄSEN

CALCULATION: CUTTING SPEED, FEED AND MACHINING TIME FOR INTERNAL THREAD MILLING



> **Schnittgeschwindigkeit** / Cutting speed — $V_c = \frac{d \times \pi \times n}{1000}$ (m/min)

> **Drehzahl** / Revolution p. m — $n = \frac{Vc \times 1000}{d \times \pi}$ (g/min)

> **Umfangsgeschwindigkeit** / Perimeter feed — $Vf = n \times z \times fz$ (mm/min)

> **Mittelpunkvorschubgeschwindigkeit** / Center feed — $Va = \frac{Vf \times dAFr}{dAWrkst}$ (mm/min)

Beim Gewindefräsen wird die Vorschubgeschwindigkeit Va im CNC Programm eingegeben. / For thread milling operations the feed Va is programmed into the CNC machine.

CNC PROGRAMMIERUNG FÜR DAS FRÄSER VON INNENGEWINDEN
CNC PROGRAMMING FOR INTERNAL THREAD MILLING

Die Programme zur Werkstückbearbeitung werden normalerweise nach DIN 66025 durchgeführt und beginnen mit der Auswahl von Fräsers und Werkzeugwechsler. Der Fräser wird im Eilgang über das Werkstück in Position gebracht und auf Idealhöhe für die Bearbeitung gesenkt. Um die Arbeitslast auf dem Fräser zu minimieren, wird eine 180° Einfahrschleife gewählt. Der 360° Bearbeitungszyklus hat bei Bearbeitung im Uhrzeigersinn zur Herstellung von Rechtsgewinden Z als Richtung. Um mögliche Verweilmarken auf dem Gewinde zu vermeiden, wird eine 180° Ausfahrschleife gewählt. Zum Abschluß des Fräszyklus fährt das Werkzeug wieder auf die Ausgangsposition.
Programming for thread milling is normally done according to DIN 66025 and starts with the selection of tool and tool changer. The tool is positioned in rapid motion above the workpiece and lowered to the correct height for starting the machining cycle. To minimize stress on the tool, a 180° entry loop is chosen.
The 360° machining cycle has direction Z when producing right hand threads clockwise. To avoid marks on the thread, a 180° exit loop is chosen. The cycle is finished by returning to the initial position.

VORTEILE DES GEWINDEFRÄSENS MIT SCHAFTGEWINDEFRÄSERN

BENEFITS OF THREAD MILLING WITH STRAIGHT SHANK THREAD MILLS

- **Die Maßhaltigkeit des Gewindes kann mit hoher Präzision bestimmt werden**
  The thread accuracy can be tetermined with high precision
- **Kein Bruch des Schnittprofils /** No damage of thread profile
- **Niedriger Energiebedarf /** Low energy consumption
- **Kurze Bearbeitungszeiten dank hoher Schnittgeschwindigkeiten**
  Low machining time due to high cutting speed
- **Hervorragende Oberflächengüte der Gewinde /** Excellent surface finishing of threads
- **Eine Vielzahl unterschiedlicher Gewindedurchmesser gleicher Steigung können mit einem Werkzeug hergestellt werden**
  One tool can produce a great variety of thread diameters with identical pitch
- **Kurze Späne, somit keine Spanprobleme /** Short chips avoid problems
- **Ein Werkzeug kann sowohl Rechts- als auch Linksgewinde in Sack- und in Durchgangslöchern herstellen**
  The same tool can produce right and left hand threads in blind and through holes
- **Auch dünnwandige Werkstücke sind aufgrund der geringen Fräskräfte bearbeitbar**
  Due to low milling power machining of thin walled workpieces possible
- **Schnittwerte können flexibel dem zu bearbeitendem Material angepasst werden.**
  Cutting data can be adapted flexibly to the material to be machined
- **Kein Drehrichtungswechsel mit der Hauptspindel notwendig.**
  No reversal of rotation of the main spindle necessary
- **Kein Gewindeschneidfutter notwendig. /** No threading chucks necessary
- **Exakte Gewindetiefe. /** Exact thread depth
- **Bei Sacklochbearbeitung kann das Gewinde bis nahe zum Grund gefertigt werden.**
  When machining blind holes, the thread can be produced very close to the bottom
- **Geringe Werkzeugkosten bei großen Gewinden /** Low tool costs for big threads
- **Gute Bearbeitung auch schwer bearbeitbarer Werkstoffe**
  Easy machining of materials difficult to machine

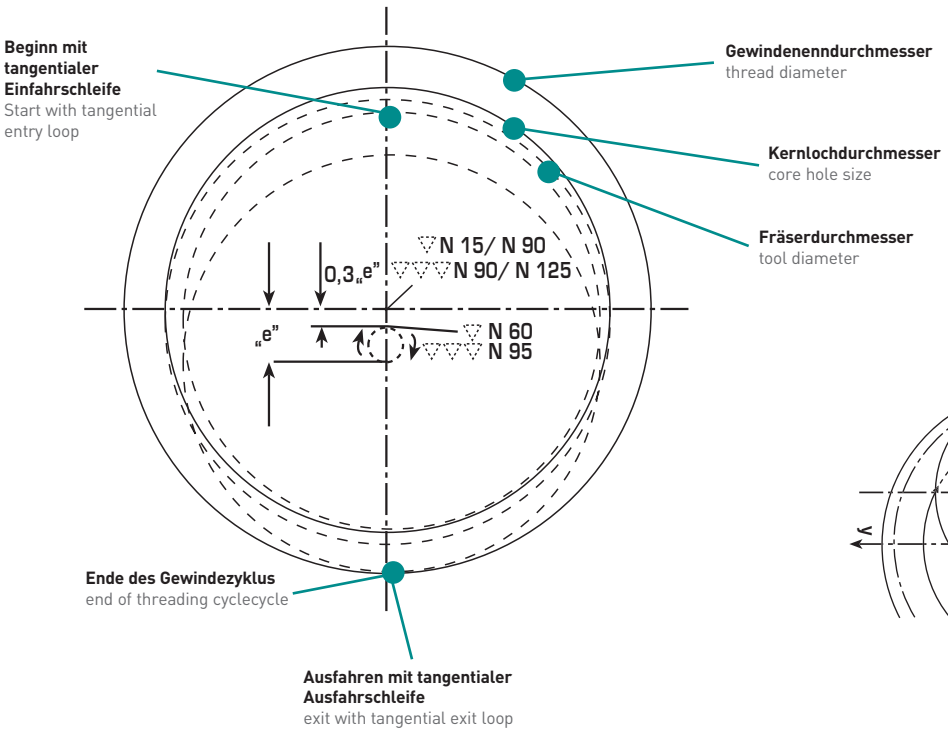
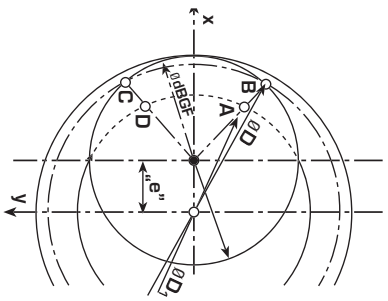
GEWINDEFRÄSEN MIT DTM
THREAD MILLING WITH DTM

VORGEHENSWEISE BEIM BOHREN, SENKEN UND GEWINDEFRÄSEN
METHODOLOGIE FOR DRILLING, CHAMFERING AND THREAD MILLING

Die DTM Fräser sind Werkzeuge zur kombinierten Spanförderung, deren Eigenschaften Bohren, Senken und Gewindefräsen in einem einzigen Arbeitsgang ermöglichen. Gegenüber dem konventionellen Gewindeschneiden ergeben sich erhebliche Vorteile:
The DTM thread mills are tools for combined chip removal. Their characteristics allow drilling, chamfering and thread milling in one single operation. Compared to conventional tapping, the following advantages exist:

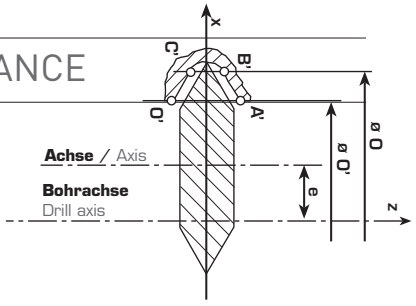
- **verkürzte Bearbeitungszeiten**
  short machining time
- **kein Werkzeugwechsel**
  no tool change
- **sehr hohe Bearbeitungsqualität**
  very good finishing
- **kurze Späne mit gutem Spantransport**
  short chips with good chipflow
- **ein Werkzeug für Sack- und Durchgangslöcher**
  one tool for blind and through hole
- **geringer Schneiddruck ermöglicht die Bearbeitung dünnwandiger Werkstücke**
  low cutting pressure allows machining of thin walled workpieces
- **alle gewünschten Toleranzen können gefertigt werden**
  all tolerances can be obtained
- **exakte Gewindetiefe**
  exact thread depth



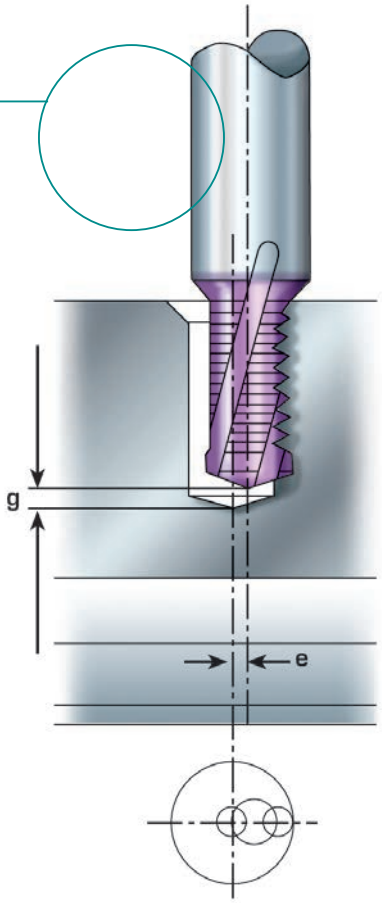


VERÄNDERUNG DER TOLERANZEN / VARIATION OF TOLERANCE

Durch Veränderung des Fräserradius im Programm kann jede gewünschte Toleranz erzielt werden.
By changing the tool radius in the program any tolerance can be achieved.



BEARBEIZTUNGSBEISPIEL / APPLICATION EXAMPLE



Wie exemplarisch in untenstehenden Zeichnungen dargestellt, ist die Bearbeitung auf einer 3 Achsen CNC Maschine durch schnelle Positionierung für die Arbeitsgänge des Bohrens und Senkens charakterisiert. Nach kurzem Rückzug (g) und Positionierung (e) wird der Gewindefräsvorgang eingeleitet, der im Gleichlauf (G02) durchgeführt wird. Werkzeugdrehrichtung und Zirkulation sind gleich, was den Werkzeugverschleiß minimiert.
Beim Gegenlauf (G03) ist die Werkzeugdrehrichtung gegenläufig zur Zirkulationsrichtung. Diese Bearbeitungsart ist in Materialien bis 700 N/mm, bspw. Aluminiumlegierungen, einsetzbar und verkürzt die Bearbeitungszeit erheblich.
As shown in below drawing, when working on a 3D CNC machine a quick approach for the drilling and chamfering process is done.
After short retreat (g) and positioning (e) the climb milling (G02) thread milling process is started. Tool rotation is identical with circulation, which minimizes tool wear. In conventional milling (G03) the tool rotates in reverse direction to the circulation. This type of machining is adequate for materials – 700 N/mm, e.g. Aluminium alloys and reduces machining time substantially.

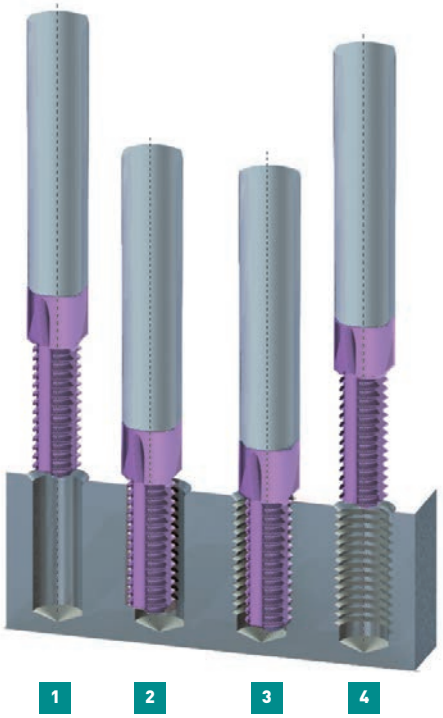
Rückzug auf Ausgangsposition und Beenden des Prozesses
Return to starting position, end of process

BEARBEITUNGSZYKLUS MIT GEWINDEFRÄSER TYP TP
MACHINING CYCLE WITH THREAD MILL TYPE TP

ARBEITSABLAUF / MACHINING CYCLE:

1. **Positionierung des Werkzeugs zentrisch über der Bohrung**
   Tool is centered above the drill hole
2. **Start des Gewindefräsens mit einer 90° Einfahrschleife**
   Start of thread milling with a 90° immersion loop
3. **Beenden des Fräsvorganges mit einer 90° Ausfahrschleife**
   End of thread milling with an exit loop
4. **Zurückfahren auf Startposition und Beenden der Bearbeitung**
   Return to starting position and finalizing the machining process



ARBEITSZYKLUS MIT GEWINDEFRÄSER TYP MICRO
MACHINING CYCLE WITH THREAD MILL TYPE MICRO

ARBEITSABLAUF / MACHINING CYCLE:

1. **Werkzeugs fährt auf Startposition zentrisch über die Bohrung -** Tool is centered above the drill hole
2. **Start des Gewindefräsens mit einer 180° Einfahrschleife -** Start of thread milling with a 180° immersion loo
3. **Zirkulares Gewindefräsen auf Gewindetiefe**
   Thread milling with helical intepolation down to required thread depth
4. **Zirkulares Gewindefräsen auf Gewindetiefe**
   Thread milling with helical intepolation down to required thread depth
5. **Beenden des Gewindefräsvorganges mit einer Ausfahrschleife -** Start of second thread milling cycle with a 90° immersion loop
6. **Verfahren auf Startposition un Beenden des Bearbeitungsvorganges -** Return to initial position and end of machining cycle
